

ACCESSORIES

UVL-13R Accessories ... Use the wall adapter (115volt/12 amp, 2000 ma operation) for office/home use. For field use, order a *battery pack and charger* (P/N 45-0014-01), *cigarette plug* (58-0043-01) and *alligator clips* (58-0153-02).

Chromato-Vue® Cabinets ... A darkroom environment is created with the C-10 Cabinet (P/N 95-0072-01). Materials can be placed inside the cabinet and viewed through the UV blocking viewport. Access to cabinet interior is easy with the light-blocking curtain.

Lamp Stands ... Models UVL-23RS and UVL-23RW include a lamp stand. Lamp stands are available for other models — *J124 stand* (98-0020-03) is for compact lamps and the *J129 stand* (98-0016-03) is for use with the hand-held lamps.

Blak-Ray® UV Protective and Contrast Control Spectacles ... Special formula lenses of the Goggles (98-0002-02) reduce "blue haze" interference while providing maximum protection from extended use of high intensity UV light sources while the *Spectacles* (98-0002-01) are used for sporadic use, lower intensity UV light sources and can be worn comfortably over prescription glasses.

PRODUCT WARRANTY

UVP's products are guaranteed to be free of defects in materials, workmanship and manufacture for one (1) year from the date of purchase; transilluminators are guaranteed for (2) years. Consumable and disposable parts including, but not limited to bottles, tubes and filters, are guaranteed to be free from defects in manufacture and materials for ninety (90) days from date of purchase. If equipment failure or malfunction occurs during the warranty period, UVP shall examine the inoperative equipment and have the option of repairing or replacing any part(s) which, in the judgment of UVP, were originally defective or became so under conditions of normal usage and service.

No warranty shall apply to any instrument, or part thereof, that has been subject to accident, negligence, alteration, abuse or misuse by the end-user. Moreover, UVP makes no warranties whatsoever with respect to parts not supplied by UVP or that have been installed, used and/or serviced other than in strict compliance with the instructions appearing in the operational manual supplied to the end-user.

In no event shall UVP be responsible to the end-user for any incidental or consequential damages, whether foreseeable or not, including, but not limited to property damage, inability to use equipment, lost business, lost profits, or inconvenience arising out of or connected with the use of instruments produced by UVP. Nor is UVP liable or responsible for any personal injuries occurring as a result of the use, installation and/or servicing of equipment. This warranty does not supersede any statutory rights that may be available in certain countries.

Compact & Handheld Ultraviolet Lamps OPERATING INSTRUCTIONS

WARNING

Do not look into a lighted shortwave or multi-band Mineralight lamp as it can quickly sunburn your eyes and skin. Always hold Mineralight® lamps so that the light beams are away from you. The Blak-Ray® lamp's longwave ultraviolet is generally considered harmless to the average person. Individuals that are photosensitive or are subject to long term exposures may expect adverse reactions if they do not have adequate protection.

ULTRAVIOLET LIGHT

Ultraviolet energy cannot be detected by the human eye. A bluish light will be visible through the filter of your lamp. This is due to the emission of visible light from the tube. The special filter eliminates most of the visible light interference. Ultraviolet energy is just shorter in wavelength than visible light and can be divided into three groups:

Longwave ... The ultraviolet energy nearest to the visible light range (commonly called black light), activates fluorescence in numerous natural substances and manufactured materials.

Midrange ... The ultraviolet energy representing the shortest wavelengths found in sunlight, causing sunburn and used to fluoresce certain substances more effectively than shortwave or longwave ultraviolet light.

Shortwave ... The ultraviolet energy farthest from visible light, shorter than rays in sunlight, and primarily noted for its ability to fluoresce minerals for chemical analysis, and for its germicidal effects.

For information on ultraviolet lamp applications, refer to UVP's web site:

Click on Application Notes

USING THE ULTRAVIOLET LAMP

Plug your lamp into a standard AC outlet. Single ultraviolet wavelength lamps utilize an ON/OFF rocker switch. Multiple ultraviolet wavelength lamp models use an ON/OFF/ON rocker switch where the ON corresponds to the UV wavelengths. These ultraviolet lamps are designed for use in dark or semi-dark areas. Allow enough time for your eyes to adjust to the darkness prior to using the lamp. Some materials will tend to fluoresce brighter than others. This reaction is due to the concentration of fluorescence on the material and varying degrees of brightness of different colors.

UVL-13R and UVL-9R operate with a 12V connector which plugs into an automobile cigarette lighter. These portable lamps are excellent for field use and can be used for windshield curing. The lamp can be attached to the window with suction cups (purchased separately). These lamps can also be operated from a wall outlet or with the use of an optional battery pack and charger, or alligator clips (see accessories for ordering information).

USING THE WAVELENGTH SELECTOR (Models **UVGL-55, UVGL-15**)

The wavelength selector is included on multi-band lamps — half longwave and half shortwave. The wavelength selector is designed to block off either longwave or shortwave on these lamps. The selector can be slid up and down to give you either wavelength. When the selector is moved over the bottom half of the filter area, it blocks the longwave UV, allowing only shortwave UV to be emitted. By sliding the selector over the top half of the filter, only the longwave UV is emitted. The wavelength selector snaps on or off the lamp easily.

WARNING: REMOVE POWER CORD FROM POWER SOURCE PRIOR TO SERVICING.

FILTER ASSEMBLY AND TUBE REPLACEMENT

Filters on the longwave lamps last indefinitely and should never need replacing unless broken. Lamps with a BLB tube do not use a filter as the BLB tube is self-filtered. Shortwave and midrange filters have an average life of 1000 hours.

Compact Lamps ... To replace the filter or UV tube on the four-watt compact lamp assembly, remove the product label on the face of the lamp as one (or two depending on the model) of the screws is located under the label.

To remove the filter and frame assembly, unscrew the four retaining screws. Two screws are located above the filter and one below. Replace the filter and frame

assembly with the new replacement assembly and insert and tighten the four screws. To remove the tube, grasp the tube ends by twisting one quarter turn until the tube is free.

Handheld Lamps ... To change the filter on six-watt models, the filter assembly snaps out of the lamp housing. Remove the lower housing. To remove the tube, carefully grasp the tube ends by twisting one quarter turn until the tube is free. Insert the new tube, giving it a twist to lock in place. Reassemble filter assembly.

Note: when replacing a multi-band shortwave/longwave tube, be sure to place the longwave tube side on the proper end.

REPLACEMENT PARTS

MODEL	TUBE/WAVELENGTH	FILTER/FILTER FRAME
<i>FOR HANDHELD LAMP MODELS</i>		
UVG-54	34-0013-01 254nm shortwave	98-0004-03
